

Closer to Farm Simulation Games

Our Simulation Games are immersive, in-person role-playing experiences where participants take on the responsibilities of farmers, distributors, retailers, consumers, and policy makers.

Through collaboration, strategic decisions, and real-world challenges, players explore how a short food supply chain works, and why it matters.

HOW IT WORKS

Players collaborate for about 2 hours to build a functioning, sustainable short supply chain.

You'll face realistic situations such as weather events, resource shortages, or shifting consumer needs.

Success depends on three key goals: sustainability, profitability, consumer satisfaction.

Can your team create a food system that works for everyone?
