

Future Forest

F.F. is a metaphorical expression of vision for the future. It is a vision of interaction between humans and nature, but also of interaction among humans themselves and thus, the **condition of sustainable living**. As an inspiration for the activity we want to search for old **stories** and european **mythology** from the times when the nature was the God.

ART KRUH

FF is a **Youth Exchange** focused on using artistic methods to share important messages to the public. Young people will show their interest in our future, addressing the audience for a responsible attitude towards **responsibility for natural and urban environments** and a proactive approach towards this topic. These young artists will show that the need for our responsible actions is not limited to our behaviour in „real nature“ like forests but also in everyday urban life.

Public will be provoked to think about general and everydaylife topic like today values, overconsumption, selfishness, use of water, production of waste, plastic etc. On the other hand, young people will learn and exchange about the **power of art to express and share messages in social environment**. Particular artistic methods used will be performative arts, streetarts, dance, theatre, supported by visual art, music, singing etc. The project will end with a public performance on a local festival.
