АНДРОИДНАЯ ТЕХНИКА

Ministry of Education for Russian Federation

Ministry of Education and Science of Chelyabinsk Oblast

Nosov Magnitogorsk State Technical University

National Center for Research "Androidnaya Tekhnika"

Project description:

The development of multiple intelligence contributes to the successful self-determination of children in a rapidly changing world.

In 2020, in conjunction with our partners the 'Campus Project' will be brought to life in the Urals. The name of the project is 'Civilisation' and the project follows both the Campus structure and the federally recognised "Multiple Intelligence project". Through different zones of intelligence, we will create a new civilisation which incorporates a wide range of skills and personalities, bringing out the best in each student and pushing them to move out of their comfort zone.

To coincide with 75 years of Russian-American Space cooperation, we will be looking to the future and focusing on robotics with the help of Quantorium Magnitogorsk. This will be a technical hands-on project which will help each student acquire new skills. For participants of the project, classes are provided in specialized laboratories of robotics, IT technologies, VR and 3D modeling

We welcome budding engineers and those wanting to learn something new and broaden their horizons!

What will be included?

Accommodation, meals and the academic programme (32 Academic hours)

What we can help with:

We can provide an invitation for Visa to each participant.

When is the deadline for applying?

15th March 2020

Registration
