# Background & Experience

**ELA** was created to improve the quality of educational services, to promote educational values, and help young people find their place in the modern world.

Our aim is to change the notion of education: We are a group of **inspired schools**, ready to provide the language learning community with **cutting-edge approaches** and **reliable methods**, ultimately helping people to realize their potential and find their place in the modern world.

With a team of highly experienced trainers, teachers and coaches we support our students and their families in their personal development. We offer training in a number of foreign languages as well as skills.

**ELA schools** focus on the development of

- **foreign language skills for intercultural communication**
- **students' interpersonal skills** (communication, relationships, coaching etc),
- **digital competences** (e-learning, LMS, blended learning, flipped c/room approach, STEM etc)
- **21st century skills** (soft skills, problem-solving skills, communication, media literacy, creativity, entrepreneurship etc)
- **classroom techniques** (critical thinking, inclusion of art, well-being etc)
- **sustainable economies** (eco-friendly practices, environmental awareness etc)

One of our main aims is to **reinforce the role of lifelong learning and create a sense of world citizenship based on understanding and respect for human rights and democracy, while encouraging tolerance and respect for other peoples and cultures**. We work and collaborate with all sectors of the community (professionals, young people, adults, children, men, women, elderly, disadvantaged).

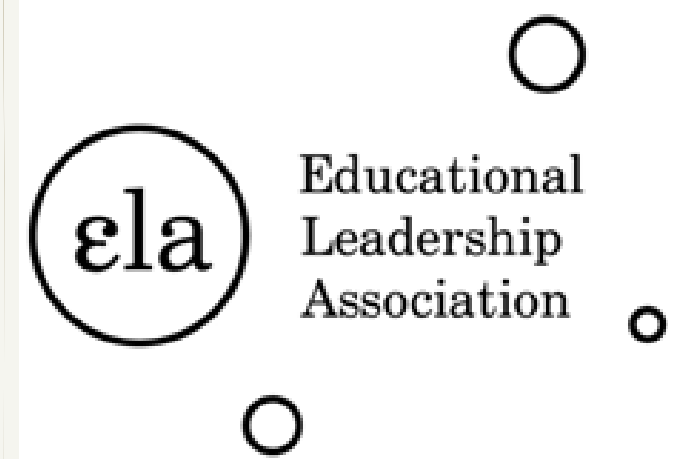

We strongly believe in improving and developing the skills our students will need for a successful and happy future!

# Our Team

*changing the face of education*

One of our goals at **ELA** is to help bring the necessary qualities to the educational work of everybody who exercises the teaching profession.

Almost all of our teachers hold an undergraduate degree, with a large number holding postgraduate degrees while everyone has extensive experience in working with students of all levels and ages. Our teachers are highly motivated, very enthusiastic about sharing ideas and activities with their colleagues, very passionate about the development of education and the vast possibilities of using various educational tools to achieve excellence.

Our well-qualified team is dedicated to working towards creating the best possible conditions to help students to achieve their learning goals. Their teaching style is very communicative, while all of them have been described as approachable, patient, inspirational and great at involving the whole learner.

For the last 3 years we have been making sure all ELA schools offer:

- **High quality teaching:** our pedagogical approaches are appropriate, up-to-date and adapted to participants' learning needs. Our language courses include a well-designed approach with clear feedback to participants.
- **Inspiring and interactive learning:** All our courses are engaging, interactive, and holistic, while facilitating sharing and creativity.
- **Innovative and relevant content:** the content of all our courses are up-to-date, evidence-based, and based on recent research and practice in education.
- **Use of digital tools and blended learning:** the use of digital tools enriches and complements the learning process before, during or after the physical class. We offer our own learning management system in order to blend both synchronous and asynchronous learning.
- **Support:** before, during, and after each course, we address questions, queries and requests in a timely and effective way.
- **Accessibility and Fairness:** Our services are accessible to all learners, and no distinctions are made.
- **Transparent costs:** All fees necessary to participate in any course are clearly presented before registration, together with a list of services that these fees cover.

Our association's members can be seen here: <https://ela.edu.gr/wp/who-we-are/>

# Eco-Friendly Practices

At **ELA** we work towards setting an example for our students and community. A few generations ago it seemed like the world's resources were infinite, and people needed only to access them to create businesses and grow humanity.

Today, we know how false that is. We now know that rather than finding ways to exploit new resources, people and companies need to focus on finding sustainable ways to grow, while protecting the planet and the resources we have left.

Since 2019 our member schools have adopted environmentally friendly practices, such as:

- **Recycling Bins at their premises**
- **Paperless registration and communication**
- **Electronic, paperless assessment**
- **Reuse of office supplies, paper and other educational material**
- **Avoidance of plastic cutlery**
- **Energy saving practices**
- **Outdoor Classes**
- **Shopping local**
